DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the cassette of claim 6 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Page: 2

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to because the reference symbols have been enclosed within outlines in violation of 37 CFR 1.84(p)(1). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of

Art Unit: 2884

an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Note the use of "comprises" which is legal phraseology.

4. The disclosure is objected to because of the following informalities: page 5, line 31, "it's" has been used where --its-- is required.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2884

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Page: 4

6. Claims 1, 2, and 10 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Evans et al. (US006773160B2).

With respect to independent claim 1, Evans et al. discloses a cassette handling apparatus (Fig. 1) in a storage phosphor reader 10 for reading a latent image stored in a storage phosphor 40 contained in a cassette 20 which comprises a cassette platen 30 and front plate 34 (Fig. 9) for receiving a cassette 20 having a storage phosphor 40, a cassette centering guide mechanism 32 for centering a received cassette 20 on the cassette platen 30 (column 12, lines 60-62), a cassette feed mechanism 31 for moving a received cassette 20 into contact with the front plate 34, and a storage phosphor feed mechanism (column 10, lines 1-6) for feeding a storage phosphor 40 out of a received cassette 20 into the storage phosphor reader 10 for processing.

With respect to dependent claim 2, the cassette centering guide mechanism of Evans et al. also includes left and right cassette guides 33 (Fig. 9) and means for moving the guides 33 into and out of centering when (a cassette 20) is received on the cassette platen 30 (column 12, line 63 to column 13, line 9).

With respect to dependent claim 10, the cassette 20 in the apparatus of Evans et al. includes a door 21 which opens and closes (Fig. 4) and wherein the storage phosphor feed mechanism opens the cassette door 21 before the storage phosphor 40 is fed out of the cassette 20.

Response to Submission(s)

7. This application has been published as US2004/0178374A1 on September 16, 2004.

Application/Control Number: 10/756,928 Page: 5

Art Unit: 2884

Allowable Subject Matter

8. Claims 3, 8, 9, and 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. The following is a statement of reasons for the indication of allowable subject matter: the left and right cassette guides 33 in Evans *et al.* are not moved by racks; the cassette centering *guide* mechanism of Evans *et al.* does not prevent overloading; no cassette receipt sensor assembly is suggested; no pawls are suggested; no vertically movable member of the type recited is suggested.

Conclusion

- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The blades attached to motors 37 in the radiant image information reader of Ogawa et al. (JP 4-42222 A) are suggestive of a cassette 1 centering guide mechanism.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Constantine Hannaher whose telephone number is (571) 272-2437. The examiner can normally be reached on Monday-Friday with flexible hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David P. Porta can be reached on (571) 272-2444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
